[Flagship Project Review](#)

Project Name: Cheat Sheet Series
Project Leader(s): Dominique Righetto, Jim Manico
Github page: https://github.com/OWASP/CheatSheetSeries
Project Web Page:https://www.owasp.org/index.php/OWASP_Cheat_Sheet_Series
Project Type: Documentation

Review One

Can the project be built correctly (if not, please explain)? Not applicable for a documentation project

How many commits/updates does the project have in the last 6 months? More than 40+

Has the project had any releases in the last 6 months? Yes

Does the project wiki page and project website reflect the latest releases? Yes

Does the project have a relevant project summary? Yes
If not, please explain:

Does the project have a relevant roadmap? Yes
If not, please explain:

According to the project source control and/or issue tracker, does the project have a good track record of resolving issues and answering questions from project consumers? Yes
If not, please explain:

Does the project use an appropriate Community Friendly License and which one?
Yes, CC By SA
If not, please explain:

Are project deliverables, information, and releases readily available and accessible to the public? Yes
If not, please explain:

To your knowledge, do the project leaders and contributors treat everyone with respect and dignity? Yes
If not, please explain:

Is the project vendor neutral? Yes
If not, please explain:

Is the project free and open and not – for – profit? Yes
If not, please explain:

Does the project have a version number with a clear release schedule? Yes

Does the project have source control and a public issue tracking system? Yes

Are there instructions on how to use and build the project properly? Yes

Does the project include online documentation or documentation built into the tool?
It is a documentation project

Does the project include build scripts that facilitate building the application from source? n/a

Does the project have an easy to use installer (Goal: Fully automated installer)(or standalone executable version)? n/a

Is the tool/deliverable user friendly and easy to use? Yes

Does the project do what they claim? Yes

Is the project internationalized? Not that I can tell; this is highly recommended for a flagship project but not required. Would be nice to see a roadmap for it.

Does the project have the expected quality for a commercial/release product?

Additional comments, including information that you feel prevents the project from being promoted: This project should be promoted based on the quality of the deliverable; would like to see i18n.

Review Two

Can the project be built correctly (if not, please explain)? Yes

How many commits/updates does the project have in the last 6 months? >50

Has the project had any releases in the last 6 months? This is Version 2 of the CheatSheetSeries, all releases/PRs go through an established review process before being released to the official page

Does the project wiki page and project website reflect the latest releases? Yes

Does the project have a relevant project summary? yes
If not, please explain:

Does the project have a relevant roadmap? Yes, Github feature
If not, please explain:

According to the project source control and/or issue tracker, does the project have a good track record of resolving issues and answering questions from project consumers? Yes, on the Github page
If not, please explain:

Does the project use an appropriate Community Friendly License and which one?
Yes
If not, please explain:

Are project deliverables, information, and releases readily available and accessible to the public? Yes
If not, please explain:

To your knowledge, do the project leaders and contributors treat everyone with respect and dignity? Yes
If not, please explain:

Is the project vendor neutral? Yes
If not, please explain:

Is the project free and open and not – for – profit? Yes
If not, please explain:

Does the project have a version number with a clear release schedule? Version number: 2; releases on the basis of approved PRs

Does the project have source control and a public issue tracking system? Yes, on Github

Are there instructions on how to use and build the project properly? Yes, manual build and an automated build

Does the project include online documentation or documentation built into the tool?
Online documentation

Does the project include build scripts that facilitate building the application from source? Yes, manual build section

Does the project have an easy to use installer (Goal: Fully automated installer)(or standalone executable version)? Offline website and automated build

Is the tool/deliverable user friendly and easy to use? Yes

Does the project do what they claim? yes

Is the project internationalized? Just in English

Does the project have the expected quality for a commercial/release product? Yes

Additional comments, including information that you feel prevents the project from being promoted:

More languages would be useful to have, as it is a documentation project
